## Setting up SDL for g++

Last Updated 7/02/07

1) Create a source file with the following code:

```
#include "SDL/SDL.h"

int main( int argc, char* args[] )
{
    //Start SDL
    SDL_Init( SDL_INIT_EVERYTHING );

    //Quit SDL
    SDL_Quit();

    return 0;
}
```

2) Then type at the command line:

```
g++ -o myprogram mysource.cpp -ISDL
```

and you're done.

The RPM also installed the SDL documentation on your computer.

It should be at `usr/doc/SDL-devel-1.2.9/index.html`,  
`usr/doc/SDL-devel-1.2.10/index.html` if you're using SDL 1.2.10,  
`usr/doc/SDL-devel-1.2.11/index.html` if you're using SDL 1.2.11, etc, etc.

Bookmark it and keep it handy for reference.
